CASE STUDY > GEORGE BUSH INTERCONTINENTAL AIRPORT

GEORGE BUSH INTERCONTINENTAL AIRPORT
TEXAS

MARKET
Public Space

LOCATION
Houston, TX

COMPLETION DATE
May 2017

MAIN CHALLENGES
Create a new modular restroom standard
Identify a best-in-class solution that offer flexibility, beauty and uniqueness.
Deliver a finished product not typically seen in airports for an enhanced customer experience.

PROJECT DESCRIPTION
The George Bush Intercontinental Airport, located in Houston, Texas, underwent a major renovation of their public restrooms. In collaboration with Jacobs and Manhattan Construction, CARVART provided cubicles in GRAPHICglass and COLORglass, privacy screens, mirrors and accessories. Upon engagement, CARVART’s engineering team was tasked with finding a solution to attach accessories directly to the glass cubicles. The result: a custom engineered, countersunk design to absorb the weight of the mounted accessories. The airport is now home to a clean, cohesive bathroom with superior hygienic properties that is easy to maintain and long-lasting despite high traffic.

PRODUCTS USED
- glassBOX
- glassMIRRORS
- glassPRIVACYSCREENS
- GRAPHICglass, COLORglass
